

Problem–Solution Fit

ComicCraft – AI Comic Story Creator

Document date: 3 October 2026

Team ID: SWTID-2026-2688

Team Size: 5

Team Leader: Annamalai H

Team Members: Harikrishnan M, Deepanraj S, Arunagiri A, Dineshkumar V

Fit evaluation

ComicCraft addresses the effort and specialist skills associated with turning a story idea into a multi-panel visual narrative. Automated panel planning and narrative layout can reduce repetitive setup work and lower the barrier to a first draft.

Problem evidence to validate

- Creators without illustration experience struggle to translate an idea into sequential visual panels.
- Manual layout and asset assembly take time and require familiarity with design software.
- The project hypothesis is that a guided generation workflow and PDF output make early-stage comic creation more accessible.

Solution fit hypotheses

- Users will value a prompt-led workflow that generates panel structure and dialogue.
- A downloadable PDF is a useful deliverable for review and sharing.
- Users will need controls for editing text, regenerating images, and maintaining visual consistency.

Validation plan: interview target users, observe first-time task completion, measure successful exports, collect satisfaction feedback, and document limitations or failure rates.
